

Global mRNA Flu Vaccine

THE OBJECTIVE

With multiple flu and flu combination studies active simultaneously, the goal was to optimize enrollment at the onset of vaccine season. Tekton Research aimed to activate sites rapidly and enroll patients efficiently while maintaining competitive enrollment across all participating sites.

KEY STRATEGIES & BENEFITS

1 Accelerated Study Start-Up & Activation
Tekton Research streamlined the contracting, study-start-up, and site activation processes, allowing for rapid patient screening and identification of well-qualified participants.

2 Targeted Patient Recruitment Approach
Leveraging a site-specific recruitment strategy, including Tekton's internal Call Center, the first patients were enrolled in **less than 12 hours** from site activation—a remarkable turnaround time that demonstrated the effectiveness of Tekton's proactive approach.

THE RESULTS

Through rigorous pre-screening and patient recruitment efforts, Tekton Research **exceeded** contracted enrollment goals across its sites. On average, Tekton sites **achieved 172% of their enrollment targets**, showcasing the company's ability to efficiently enroll qualified participants even in a highly competitive research landscape.
